DESCRIPTION

LumoScent is a processor-controlled aroma humidifier for a healthy indoor climate combined with a special light for healthy sleep. The attractive design combined with the properties for wellbeing ensures a relaxed, soothing atmosphere and healthy sleep.

AROMA HUMIDIFIER

The aroma humidifier uses ultrasound to create a micro-fine atomization of water. Depending on the essential oils used, the effective combination with therapeutic aromatic oils has a sleep-promoting, relaxing, energy-building or simply pleasant room fragrance effect.

WARM SLEEP LIGHT

Poor sleep is the number one widespread disease. The special sleep light, together with a healthy lifestyle and good sleep hygiene, can help to significantly improve your quality of life and well-being. 5 LEDs (2,000 Kelvin) in the specially developed lamp stimulate the body's own melatonin production, making it easier to fall asleep. The light can be set to three brightness levels. The subtle, warm white color has been scientifically proven to promote sleep and also creates a pleasant atmosphere.

DESIGN

The minimalist design of the new **LumoScent** blends harmoniously and timelessly into modern living environments. Flexible in installation and handling, it creates a pleasant feel-good atmosphere in all rooms. A high-quality mix of materials and quality components ensure low-maintenance, trouble-free operation and a long service life.

WELLBEING ATMOSPHERE

In addition to a comfortable temperature, relative humidity between 40% and 60% is also considered optimal for a pleasant indoor climate. This is why the combination of targeted ventilation (at >60%) and metered humidification with the **LumoScent** is ideal for a pleasant sleeping climate. The ultrasonic water atomizer also binds dust and germs with micro-fine water mist.

PROMOTE SLEEP

The special warm white light color and the dosed light intensity have a calming effect and promote the body's own melatonin release. The task of melatonin is to regulate the sleep-wake rhythm. In the evening, the hormone makes you tired and ensures a restful sleep.

The new **LumoScent** has an internal lithium battery and can therefore also be operated at the bedside without a mains connection. A standard USB Type-C® connection enables operation and recharging of the integrated battery.

BATTERY AND USB-C

AROMA-OIL

With the optional addition of **OilScent** essential oils, you can either create a pleasantly fragrant environment in the living room or promote sleep with special essential spice extracts with known effectiveness. The scent stimulus is perceived via the sense of smell and processed neuronally.
